

Vicenzo Ribas Másera

iOS Engineer — ships native Swift & SwiftUI products end to end, from a published App Store title to on-device CoreML intelligence and real-time collaboration at team scale

English: Advanced | Portuguese: Native

TECHNICAL SKILLS

Languages	Swift, TypeScript, C, Rust, Bash
Apple Frameworks	SwiftUI, UIKit, AppKit, Swift Concurrency, SwiftData, CoreData, HealthKit, CoreML, Foundation Models, App Intents, WidgetKit, SpriteKit, GameKit
Architecture	The Composable Architecture (TCA), MVVM-C, MVVM, VIPER, Clean Architecture, SOLID
Tools	Xcode, Git, App Store Connect, WebSockets, TestFlight, Instruments, Unix CLI

EXPERIENCE

Apple Developer Academy

March 2025 – November 2026

iOS Developer

- Shipped 3 native Apple products from zero to release across iPhone and Mac, owning ideation, architecture, implementation, QA handoff, and App Store submission.
- Architected features in The Composable Architecture with Swift 6 strict concurrency, keeping reducers and side effects independently testable as products scaled.
- Facilitated Agile delivery for a 50-person Spotify-model squad organization, establishing planning and tooling practices for cross-functional Product, Design, and Engineering iterations.

PROJECTS

Build Together — *Real-time team collaboration app (Easy Retro + Planning Poker)*

Swift, SwiftUI, The Composable Architecture (TCA), WebSockets, iOS + macOS

- Architected a cross-platform iOS and macOS collaboration tool in raw TCA alongside a 50-person multidisciplinary team, delivering predictable, testable state across a data-dense multi-user UI.
- Built real-time WebSocket synchronization — live shared state, optimistic updates, and automatic reconnection — keeping concurrent participants consistent through decoupled reducers and side effects.

Equilibrium — *On-device iOS walking and mobility companion*

Swift, SwiftUI, MVVM-C, HealthKit, CoreML, Foundation Models, App Intents, WidgetKit

- Built an iPhone gait companion converting 5 passively collected HealthKit walking metrics into a personal baseline and a 0–100 Mobility Score, structured in MVVM-C with a protocol-bounded domain layer.
- Shipped a fully on-device intelligence pipeline — a sub-1MB CoreML classifier inferring in under 50ms plus Foundation Models for plain-language insights — producing daily results in under 2 seconds with zero network calls.

Shiro — *iOS arcade game, live on the App Store*

Swift, SpriteKit, GameplayKit, GameKit, Game Center

- Shipped a complete iOS game with a 5-person team from concept to App Store launch, integrating Game Center leaderboards and achievements via GameKit. apps.apple.com/br/app/shiro/id6752502968

EDUCATION

Pontifical Catholic University of Rio Grande do Sul

Expected: November 2028

B.S. in Software Engineering
